"CANNELL, EYNSFORD,
KENT."

THE NURSERIES,

EYNSFORD,

KENT.

Sir, or Madam,

We have great pleasure in handing you our Seed Catalogue for 1914, and take this opportunity of expressing our gratitude for the kind way in which our customers have supported us in the past.

We are glad to say that we are now firmly established at our new headquarters at Eynsford, and are in a position to deal with all orders in a thoroughly efficient manner.

Our Seeds have been saved from the best strains and prices arranged consistent with quality.

We hold a remarkably fine stock of Bedding and other Plants, Fruit Trees, Roses, Shrubs, etc.

No order is too small to receive our best attention, none is too large for our organization.

Awaiting the favour of your esteemed commands and assuring you of our best endeavours at all times,

We are,

Yours faithfully,

H. CANNELL & SONS

(JAMES LAWSON, Manager).

NOVELTIES

FROM VARIOUS SOURCES.

Per pkt.—s. d.

Antirrhinum majus grandiflorum luteum fl. pl.—This new variety bears flowers of a brilliant canary-yellow, and is a notable development in this valuable genus. The flowers completely eclipse all others in size ... 1 0

Aster, Single Japanese White.

Aster, Single Japanese Delicate Rose.

Two new single Asters which remind one of the single Japanese Chrysanthemum; the yellow central disc encircled by a wreath of long quilled ray petals in the colours above-mentioned. It is of branching habit, and throws up a large number of side stalks, which places it in the front rank for cut flowers ... each, per pkt. 1 0

Aster, Unicum Malmaison Rose—A beautiful colour in this most curious strain. The long florets are very narrow, giving them a very thread-like appearance ... 1 0

ASTER, SINGLE JAPANESE.

Antirrhinum majus grandiflorum Cardinal—The brightest scarlet in the whole collection of this most valuable plant ... 1 0

Asparagus Sprengeri foliis variegatis—White variegated-leaved variety of this well-known plant, so popular for hanging baskets; 70 to 80 per cent. will come true from seed, but the variegation is not shown when young ... 1 6

Begonia hybrida fl. pl. Pendula—

Quite a new variety the branches of which are drooping like the Ivy-leaved Geranium and may be used in the same way. The flowers appear abundantly from light rose to dark red shades, and the hanging shoots are covered with loosely formed double flowers which can be artistically arranged in baskets, but should not be exposed to the very hot sun ... 1 6

Begonia hybrida Gigantea Duplex—Another fine advance in this lovely flower; the gigantic blooms produce two or three layers or rows of petals, presenting thus a semi-double flower of good form and substance. The mixture contains all colours known in Begonias ... 1 6

Begonia hybrida Crispa Marginata—These charming new varieties will stand high in public favour. The white hue of their rounded frilled flowers is admirably set off by a pink or red margin of varying width, which borders each petal after the manner of a Picotee, thus producing a delicacy and charm of colour quite unique among Begonias ... 1 6

- Per pkt.—s. d.
- Canterbury Bell (Calycanthemum), Carmine-rose**—A very beautiful new variety, which will be found a splendid addition to this most popular flower... 1 0
- Centaurea Moschata Rosea (Sweet Sultan)**—The colour of the flowers when opening is a very delicate rosy white with pink stamens changing into a tender rosy pink later on. In size it is quite as large as the well-known white and purple varieties, splendid for cutting purposes... 1 0
- Dimorphotheca Aurantiaca hybrida fl. pl.**—The colourings of these new double flowering varieties are as rich and varied as the single sorts, about 50 to 60 per cent. of double and semi-double flowering plants may be expected... 1 6
- Poppy, Double Ranunculus-Flowered**—Salmon shades, ranging from delicate light salmon-rose to brilliant salmon-orange; this new strain presents a most delightful effect in the open border... 1 0
- Primula Stellata hybrida Defiance (Cannell)**—A lovely refined flower, superior in every way to existing varieties in this class. The colour is a bright crimson-scarlet which contrasts well with the very deep green foliage; a novelty of sterling merit... 1s. 6d. and 2 6

Primula Obconica Gigantea Fimbriata

Kermesina—The very large bright crimson flowers of this variety measure $1\frac{1}{2}$ to 2 inches across, the petals of which are finely cut or fringed... 1 0

Primula Malacoides Rosea—The flowers

vary in colour from light rose to bright carmine-rose. During February or March the plants are almost covered with bloom if placed in a cool greenhouse or sunny window... 1 0

Schizanthus Bridal Veil—Of compact habit

forming pretty little bushes covered with snowy white blossoms presenting a striking contrast to the fresh green lacinated foliage. Height about 16 inches... 1 6

Sweet Pea, King White—Superior in size and

substance to all other white varieties, extremely vigorous and gives a large proportion of four-flowered sprays... 15 seeds 0 6

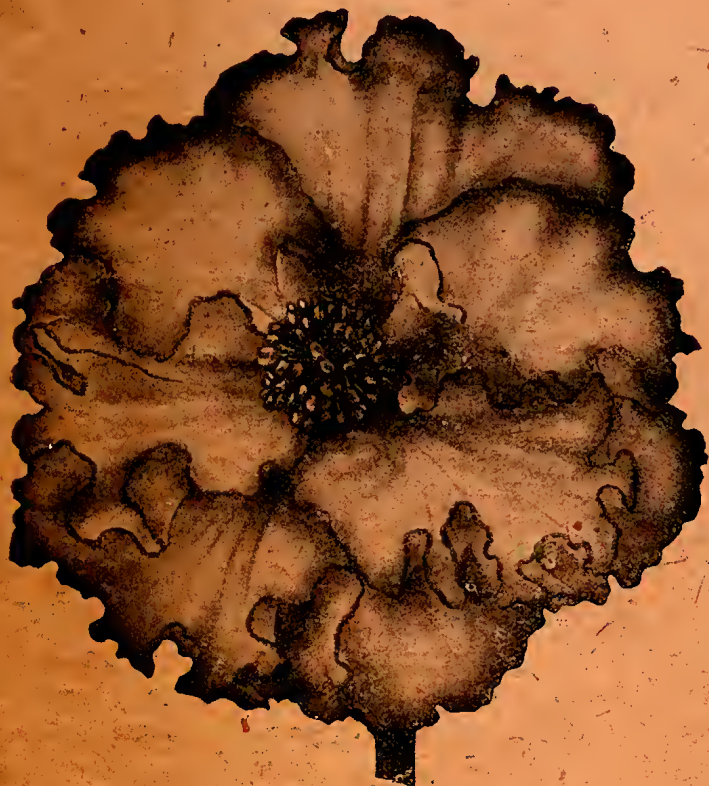

Sweet Pea, Wedgewood—A most beautiful blue

throughout the entire flower and entirely free from the harsh purple found in others of the type. It produces long stout stems and true Spencer form 12 seeds 0 6

Sweet Pea, Illuminator—The name conveys in part one of the charms of this beautiful variety as the warm salmon-orange ground colour scintillates through the rich bright cerise-pink and illuminates the flower delightfully; of great substance 12 seeds 0 6

Sweet Pea, Empress Eugenie—The colour is a delicate tone of light grey flaked with light lavender, large size, beautifully waved and crimped... 15 seeds 0 6

Sweet Pea, Constance Hinton—Of finest Spencer type, pure white, large standard and wings, very sweet scented... 20 seeds 0 6

BEGONIA HYBRIDIA CRISPA MARGINATA.

"Gardening is an enjoyment and occupation for which no man can be too high or too low."—*Earl of Carlisle.*

CANNELLS' VEGETABLE SEEDS.

FOR COLLECTION OF VEGETABLE SEEDS, See Previous Page.

GARDEN PEAS.

All carefully selected and Hand-picked.

Pints can also be supplied of all the Varieties in List.

GRADUS PEA.

CULTURE.—The earliest varieties may be sown about the second or third week in November, or first week in December, another sowing in January, and continuous sowings in the order they stand, every three weeks, up to the end of July. Sow in rows 4 to 7 feet apart (according to height, which varies wonderfully); when about 5 or 6 inches above ground, thin out if required, and properly stick. By sowing seeds of some of the early kinds in July, a late picking of Peas may be had until the frost sets in. The general height is here given of the various kinds of Peas, but of course, the season and richness of the soil will cause a difference. Our "One and Only Wash" is a complete eradicator of *Mildew* wherever it touches.

Section I.—EARLIEST VARIETIES.

	Height in feet.	Per qt. s. d.
CANNELLS' SELECTED ENGLISH WONDER Difficult to beat as a dwarf wrinkled early variety	1½	2 0
Laxtonian —One of the earliest Marrowfat Peas; pods large and well filled	1½	2 6
Hundredfold —The growth though not exceeding 2 ft. in height is very robust with deep green foliage; the pods produced in pairs are rich deep green in colour, broad, 4 to 5 inches in length, and well filled per pint, 2s. 0d.	2	—
The Pilot —Deep green peas of exquisite Marrowfat flavour. Of hardy constitution, and may be sown during the autumn to obtain early results in spring. Award of Merit, R.H.S.	3	2 6
CANNELLS' ASCENDANT —Early marrow. Large fine-shaped well-filled pods early in the season; much admired; sturdy habit, and flavour all that can be desired	3½	2 0
Gradus —Large-podded wrinkled variety, good for table and for show; pods well filled; an excellent variety	3	2 0
Chelsea Gem —Compact, short-jointed habit; pods well filled; first-rate quality; wrinkled; adapted for foreign	1	2 0
Early Sunrise —White wrinkled marrow, suitable for sowing late or early; fine flavour	2½	1 4
May Queen —Dwarf, early, fine Marrowfat flavour	3	2 0
Wm. Hurst —A useful early dwarf kind	1	1 6
William the First —Most productive; rich, sweet flavour	3½	1 6

Section II.—SECOND EARLY VARIETIES.

	Height in feet.	Per qt. s. d.		Height in feet.	Per qt. s. d.
Laxton's Fillbasket —Very prolific, pods long and closely filled; a deep green; suitable for exhibition	3	1 1	Daisy —Excellent cropper. A grand dry weather variety; splendid table qualities	1½	1 6
Prince of Wales —A first-class white wrinkled Pea of excellent flavour; good cropper	3	1 4	Duchess —Heavy cropper; pods quite straight; splendid for exhibition	5	1 9
Sharpe's Queen —A blue wrinkled marrow, pods large, and well filled; delicious flavour	2½	1 6	Perpetual Bearer —A great cropper and continuous bearer; valuable as a late variety; should be sown very thinly	3	1 6
Stratagem —A dwarf wrinkled variety of robust habit with immense pods	2	1 6	Yorkshire Hero —A superior wrinkled variety, compact habit, dark green foliage, flavour good	2½	1 0

We can also supply other varieties.

THE GLADSTONE.

CANNELLS' GARDEN PEAS.

Section III.—
MAIN or GENERAL CROP.

	Height in feet.	Per qt. s. d.
Quite Content —A cross between <i>Alderman</i> and <i>Edwin Beckett</i> . It rather resembles the former, but the pods are considerably larger than either parent. Pronounced as one of the finest ever seen	5 to 6	2 6
CANNELLS' EYNSFORD BEAUTY —Fit for picking towards the end of June. Vigorous growth. Valuable as an exhibition and general main crop variety	4	2 0
Improved Autoerat —Prolife. Should be sown early. Grand for exhibition	4	1 6
The Gladstone —Excellent cropper, pods very large and fine, delicious flavour, and a beautiful rich green. A fine variety	3½ to 4	1 6
Magnum Bonum —Fine for exhibition; long well-shaped pods, and large peas of excellent flavour, dwarf in habit. well resists mildew, splendid for the table	3½	2 0
Ne Plus Ultra —Still maintaining its position as a late variety and good flavour	5½	1 6
CANNELLS' DWARF MAMMOTH MARROWFAT —Heavy cropping, dwarf, dark rich green; delicious flavour	3	2 0
Captain Cuttle —Distinct; an acquisition for late cropping and exhibition. Robust growing; should be sown thinly. One of the heaviest late croppers in existence	3½	1 8
Dr. McLean —Blue wrinkled marrow, vigorous habit, immense pods; one of the best for main crop	3½	1 4
Duke of Albany —An excellent cropper, and invaluable for exhibition	6	1 8
Telegraph —A distinct variety, and a strong grower	5	1 6
Telephone —A wrinkled variety, an immense cropper, peas very large and of exquisite flavour; fine for exhibition	5	1 8
Veitch's Perfection —One of the best for the main crop	3	1 4

CANNELLS' COLLECTIONS OF PEAS.

Consisting of good and well-tried varieties, and ensuring a continuous supply throughout the season, all our selection.

6 quarts in 6 best kinds	7s. 6d.
6 pints in 6 „	4s. 0d.

We are prepared to supply collections of Peas in different quantities according to requirements, and consisting of the best and most suitable varieties, at current prices.

We can supply at Advertised Prices other varieties of Peas not in this List.

CANNELLS' BEANS, BROAD.

CULTURE.—For an early crop, a sowing should be made of *Mazagan* in October or November on well-drained soil. The main crop should be sown in February, and others to follow up to the end of May. Sow in drills, about 2 inches deep, the beans to be 3 inches apart, and the drills 2 to 3 feet apart. To ensure well-filled pods it is a good plan to pinch off the leading tops as soon as the lower pods begin to set.

	Per quart—s. d.		Per quart—s. d.
CANNELLS' GREEN HERCULES —Delicately-flavoured, and a fine improvement. A most desirable and profitable variety	1 6	Giant Seville Long Pod —One of the longest podded beans in cultivation; good cropper, and of fine flavour	1 0
CANNELLS' CHAMPION LONG POD —A great cropper; of handsome shape and splendid flavour. For exhibition and table purposes it is unsurpassable	1 4	Harlington Windsor —The largest and most prolific <i>Windsor</i> Bean in cultivation	1 0
CANNELLS' EXHIBITION LONG POD —One of the finest and most productive; amongst the best for exhibition	1 0	Wonderful Long Pod —Very early; a good cropper	0 9
Early Mazagan —The best for the first sowing	0 6	CANNELLS' BROAD WINDSOR —Large, and fine flavour... ..	0 10
		Green Windsor —Fine flavour. A grand improvement	1 0
		Beck's Dwarf Green Gem —An excellent dwarf sort; 1 foot high	1 6

Other varieties can be supplied.

CANNELLS' BEANS, TALL KIDNEY RUNNER or CLIMBING.

CULTURE.—Sowings may be made in April, under glass, and the plants put out about the middle of May where they are to stand. If, however, they are to be sown in the open ground, the first week in May and again in June and July. When thickly mulched and watered they will bear heavily. They should be occasionally topped, to induce side growth, and if possible stakes or supports of some kind should be used, as it allows of much finer growth and increased production of pods.

	Per quart—s. d.		Per quart—s. d.
Scarlet Emperor —A grand variety for exhibition purposes, producing enormous pods, often measuring 15 inches in length	3 6	CANNELLS' 1st PRIZE SCARLET. Long pods, and tender flesh; a heavy cropper; an excellent exhibition variety... ..	2 0
No Plus Ultra —One of the best for exhibition and main crop; pods of splendid form	2 6	Giant White —A wonderful cropper, long pods, which are very tender; a capital exhibition variety	1 6
White Czar —An enormous podded white runner Bean, very thick, fleshy, and almost stringless; flavour delicate	2 6	Painted Lady —Very handsome, scarlet and white flowers; very ornamental as well as useful	2 0
Tender and True —Grows 6 or 7 feet high, bears a tremendous crop of long, straight, fine pods, the quality being first class; seeds same shape and size as the <i>Canadian Wonder Dwarf</i> Beans	2 6		

CANNELLS' BEANS, FRENCH or DWARF KIDNEY.

CULTURE.—Sow in boxes or pots in a frame for planting out, after being carefully hardened off at the end of May, and again, in the open ground, in May and June, and for late crops up to the end of July. For forcing purposes sowings should be made in pots, under glass, from December to April. The same applies to these as to Runners respecting mulching and watering in dry season.

	Per quart—s. d.		Per quart—s. d.
CANNELLS' AVALANCHE —Dwarf, robust growing, one of the earliest, and the crop prodigious; fine flavour; distinct	2 0	No Plus Ultra —Distinct variety for early and general use; extremely productive, fine flavour	1 4
Canadian Wonder —Prolific; dwarf and compact habit, and pods being of splendid exhibition shape, great length, and delicate flavour	1 4	Earliest of All —Strong, vigorous grower; pods are long, broad, and fleshy; excellent flavour; useful for very early forcing or for general crop. 18 to 24 inches high	2 0
Negro Long Pod —Very fine cropper	1 4		

BEANS, WAX POD or GOLDEN BUTTER.

CULTURE.—Should be sown during March and April in boxes or pots under cover transplanting into open ground when all danger of frost is over; or can be sown outdoors from May to the end of July. The pods are of a beautiful creamy colour, stringless tender, and of a rich flavour. Should be boiled whole.

	Per quart—s. d.		Per quart—s. d.
Mont d'Or (Runner) —Long golden pods; tender and delicious	3 0	Mont d'Or (Dwarf) —Golden-yellow stringless pods of excellent flavour	2 6

ARTICHOKE (Globe).

CULTURE.—Sow in March or April in drills, 18 inches apart, and transplant 3 feet apart each way; or seed can be sown in gentle heat, pricked off into small pots when large enough, gradually hardening them until the end of May, and then plant out in the beds already prepared for them. The first season they will only produce a partial crop; but as it is a perennial, after being once planted, the beds continue to bear for several years. So as to secure fine heads they require good treatment; the soil should be rich, deep, and moist, and protected in winter by placing straw, bracken, or other dry material closely round the stems. It is advisable to cut the plants down after the heads are taken.

	Per oz.—s. d.		
CANNELLS' PERFECTION GREEN —A splendid selection, perfect formed heads and delicate flavour	per pkt., 6d. 1 0	Jerusalem Artichoke (<i>Helianthus Tuberosus</i>), not being produced from seed, Roots are offered on page 19.	
Large Purple Globe —Very useful	6d. 1 0	Jerusalem Artichoke —White skinned, see page 19.	
		Chinese Artichoke , see <i>Stachys Tuberifera</i> .	

The crop of Runner Beans is again exceedingly short, and prices are likely to fluctuate as the season advances. We however, have a good stock in hand, but can only bind ourselves to these prices as long as stock lasts. We therefore advise ordering **EARLY**.

RUNNER BEAN, CANNELLS' FIRST PRIZE.

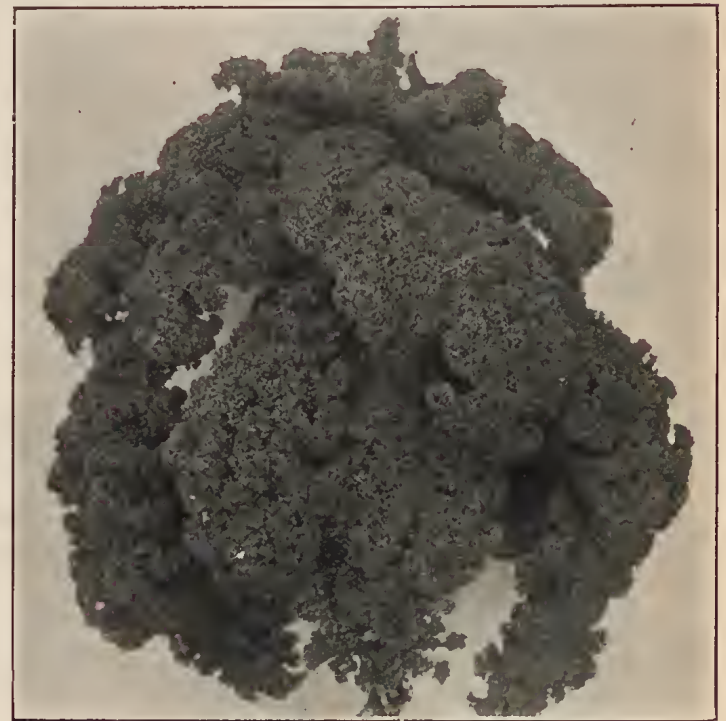

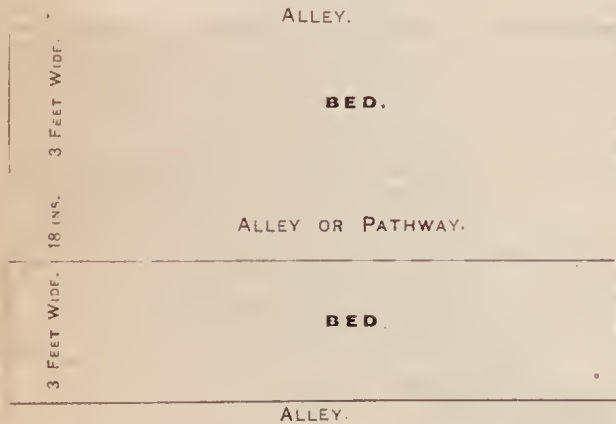

ASPARAGUS (Seed).

CULTURE.—There is no vegetable more delicious. Choose the highest and lightest ground in the kitchen garden, and stake out in September as per diagram, dig out to a foot deep, lay it on each side in the pathway then wheel in 3 inches of good manure, fork this in about another foot, and if dug over deeply two or three times so much the better; on the top of this place a fair coating of rich soil and soot, and over this 3 inches of soil from out of the alley, then place one plant to every 9 inches, spreading the roots well out, covering them over with the finest soil, free from stones. For the top covering have 6 inches of light friable or even sandy soil. The first year make one cutting only, if the plants are three years old, the following winter add more fine soil, so that there is something like 9 inches of earth above the crown of the plants. Asparagus beds made in this way with a good coating of manure and a fair amount of salt and soot every other year cannot fail to give abundance of this succulent vegetable until the peas make their appearance.

	Per oz.—s. d.
Connover's Colossal—Early, and very large	0 4
Giant—Good, for general use	0 4

CANNELLS' EXHIBITION—This cannot be surpassed; of large size and equally as well adapted for exhibition as for general market garden purposes; delicate flavour, wonderfully productive per pkt., 6d. 1 0

For Plants, see page 20.

CANNELLS' DWARF GREEN CURLED KALE

BORECOLE, or KALE.

CULTURE.—For spring use sow about the middle of March or early in April, and in August for autumn and winter use, broadcast over a well-prepared bed, and cover lightly with fine soil. When the plants are large enough to be handled, prick out on another prepared bed, about 6 inches apart, and well water them. When strong enough, plant out, in their permanent quarters, about 2 feet 6 inches apart each way.

	Per oz.—s. d.
CANNELLS' WINTER GEM —Producing a quantity of side sprouts that continue in good condition for a considerable time without showing signs of injury by the most severe weather; delicious and tender per pkt., 6d. & 1s. —	
Asparagus —A useful kind; very delicious and hardy	0 6
Improved Cottager's —Very hardy, and produces a large crop	0 6
Tall Green Curled —A useful variety	0 6

	Per oz.—s. d.
Dwarf Green Curled (German Greens) —For early and general cultivation	0 6
Thousand-Headed —Withstands the most severe weather; it is beautiful and tender when cooked	0 4
Drumhead Kale —The outer leaves resemble the Kale, and the heart that of a Cabbage. Dwarf in habit, perfectly hardy, and a most useful winter vegetable	0 8

BEET.

CULTURE.—Sow the end of April on ground that has been deeply dug and well manured the previous year. At the time of sowing, the ground should be again deeply dug, and the seeds sown in rows a foot apart. It may be sown in drills drawn by a hoe, or by dibbling a few seeds in holes an inch deep and a foot apart in the rows; thin out, when the plants are about 2 inches high, to a foot apart where in drills, and where dibbled in holes draw out all except one.

	Per oz.—s. d.
Dark-leaved Globe —Has not only a dark leaf like the best decorative strains, but is equal in the colour of the flesh to any fine selection of the Dell's type per pkt., 6d. 1 0	
CANNELLS' BEST OF ALL —Medium-sized root of a beautiful rich deep blood colour, fine shape, and clean growing. Its handsome leaves render it a very effective variety for the flower garden and exhibition table per pkt., 3d. & 6d. 1 0	
Cannells' Rotunda —Turnip shaped, flesh dark crimson colour, useful for Summer salads	0 8

	Per oz.—s. d.
Dell's Crimson —Leaves of a dark bronze colour; very ornamental for the flower garden	0 9
Nutting's Dark Red —A splendid variety for general purposes	0 8
Spinach, or Perpetual Beet —Both stalks and leaves of this variety are used—the former should be served up as Asparagus, and the latter makes an excellent substitute for Spinach	0 6

Other Varieties can be supplied.

BROCCOLI.

CULTURE.—Early sowings may be made in February, under glass, followed by sowings in the open ground, middle of April and second week in May, for successional crops. When the plants are large enough, prick out into a bed 6 inches apart, and after they have acquired strength, transplant to a piece of ground that has been previously well dug and sooted, in rows 2½ feet apart and 2 feet distant from each other. As the plants advance in growth draw the soil around the stems, and give liquid manure occasionally. We strongly recommend a sprinkling of nitrate of soda which will be found to work wonders. It is advisable to eat the heads as soon as they attain the medium size.

Section I.—For Cutting from September to November.

	Pkt.	Per oz.
	s. d.	s. d.
Grange's Early White Cape—Fine for autumn use	4d. and 0 8	1 4
CANNELL'S SELF-PROTECTING—Beautiful white and firm heads, thoroughly protected by the leaves; remain a long time fit for use, 3d. and 0 6	4d. and 0 8	1 0
Walcheren—One of the best for successive sowings	4d. and 0 8	1 4

Section II.—For Cutting from December to February.

	Pkt.	Per oz.
	s. d.	s. d.
Early White—Very fine and early; flavour sweet and delicious; snow-white heads; very bardy	—	0 8
Early Purple Sprouting—A useful variety for small gardens; much improved	—	0 8
Snow's Winter White—A valuable winter var., 6d. and 1 0	1 0	1 6
White Sprouting—Very productive, quick in growth fine flavour	3d. and 0 6	1 0

Section III.—For Cutting in March and April.

	Pkt.	Per oz.
	s. d.	s. d.
Brimstone, or Portsmouth—Too well-known to need any description	—	0 8
Knight's Protecting—A favourite sort	3d. and 0 6	0 10
Improved Leamington—Good size heads, close and well-protected; a good market variety	3d. and 0 6	1 0

BROCCOLI, EARLY WHITE.

Section IV.—For Cutting from April to July.

	Pkt.	Per oz.
	s. d.	s. d.
Latest of All—Heads well protected and of medium size, hardy; cooking qualities all that can be desired	3d. and 0 6	1 0
April Queen—One of the finest; ready for use in April and May. The heads are very large, beautifully white, and delicately flavoured	3d. and 0 6	1 0
Flower of Spring—An excellent early spring variety, forming compact white heads	3d. and 0 6	1 0
Cattell's Eclipse—Very hardy; a most excellent late sort	3d. and 0 6	0 10
Methven's June—Producing fine pure white heads till nearly the end of June. It is very hardy	0 6	1 0
CANNELL'S MODEL—Late and good; one of the hardiest and best in colour and flower, almost equal to a Cauliflower	3d. and 0 6	1 0

Other varieties can be supplied. See Plants, page 19.

BRUSSELS SPROUTS.

CULTURE.—Sow the seed between the beginning of March and end of April—the earlier the better—in drills, on a well-prepared bed, and cover thinly with fine soil. When the plants are 2 or 3 inches high draw out the strongest and transplant into another bed, 6 inches apart. In May or June plant 2 feet apart in the rows and 1½ feet between the plants in the rows. Ground should be prepared early, so as to allow the soil to become firm.

CANNELL'S MATCHLESS—An excellent variety, most reliable and useful kind, and from the kind, and from the seed we are sending out, saved from our improved stock; the one indispensable variety for keen competitive purposes, and also for general use and market garden requirements	per pkt., 3d. and 6d.	1 0
Cambridge Champion—The sprouts are firm and of excellent flavour, keeps well and one of the best for the table	per pkt., 4d. and 8d.	1 4
Aigburth—One of the hardiest and most productive varieties in cultivation	per pkt., 4d.	0 8
Scrymger's Giant—A superior and useful variety; compact sprouts of delicate flavour	—	0 6
Dakeith—Robust habit, medium height, richly flavoured aprouts; a good market gardener's variety	—	0 8

Other varieties can be supplied. For plants, see page 19.

CANNELL'S MATCHLESS.

CABBAGE, GARDEN.

CULTURE—No better preparation of ground with a coat of manure can be made than in the lifting of early Potatoes, when such a piece of ground may be profitably utilised by them. Sow in March and April for autumn and winter use, and early in August for spring and summer cutting. The small early kinds do well planted in rows 18 inches apart and 15 inches between the rows; the larger-growing kinds require to be put 2 feet apart each way.

CABBAGE, CANNELLS' DEFIANCE IMPROVED.

ANNELLS' DEFIANCE IMPROVED—Has been carefully selected for years, and the most popular kind round this part of Kent, and from the many good qualities it possesses it is always spoken of as the most perfect variety. Its second crop of little side Cabbages are pictures of perfection and are delicious in flavour. The first time it was placed before the Royal Horticultural Society it was unanimously awarded a First Class Certificate. Per pkt., 3d. and 6d.; per oz., 1s.

Large Drumhead, or Ox Cabbage—Producing very heavy crops. Sow 6 lbs. to the acre. A reduction made when large quantities are required. ... per lb., 2s. 6d. 0 3

Christmas Drumhead—Small solid heads; very hardy ... 0 6

Other varieties can be supplied.

CABBAGE, SAVOY.

CULTURE—Treat the same as for Cabbage.

Per oz.—s. d.

ALL HEAD—A very early variety, with long solid heads of a rich yellowish-green colour. In flavour it resembles that of the finest Brussels Sprouts. A really fine sort for market gardening per pkt., 1s.

SELECTED DRUMHEAD—Forms into splendid fine specimens; sweet and tender ... 0 6

Per oz.—s. d.

Early Dwarf Ulm—Early and compact; may be planted close ... 0 6

Green Curled—Suitable for the main crop ... 0 6

Ormskirk Late Green—It is of large size and handsome, very hardy, and being late, comes into market when other sorts are over ... 0 6

For Plants, see page 19.

Other varieties can be supplied.

CAPSICUM AND CHILI.

USE—These pods are used for pickling, and when ripe, ground to make Cayenne pepper, and also as ornamental pot plants in the greenhouse.

Per pkt.—s. d.

Child's Celestial Pepper—Creamy-yellow, changing to scarlet. ... 0 6

Chili ... 3d. and 0 6

Golden Queen—A very ornamental variety .. 3d. and 0 6

Per pkt.—s. d.

Large Bell, or Bull's Nose—Large, glossy red ... 3d. and 0 6

Mixed Varieties ... 3d. and 0 6

Elephant's Trunk—Long glossy scarlet fruits ... 3d. and 0 6

Other varieties can be supplied.

CARDOON.

CULTURE—Sow in April, and grow in trenches in the same way as Celery, allowing a little more room in between the plants.

Large Spanish—Cultivated for the mid-rib of the leaves, blanched like Celery; used for soups, stewing and salads ... per oz., 10d.

CARROT.

Seed saved from Selected Roots only.

CULTURE.—The *French Scarlet* may be sown in frames in December and January; in February succession sowings may be made on warm borders; in March, a large sowing may be made; and for general crop sow about the middle of April, either broadcast on beds or in drills. Preference should be given to the drills, as the crop can then more easily be kept clean. As soon as the plants are 2 or 3 inches high, thin out to 2 or 3 inches apart at the first thinning; after a few weeks give a final thinning to 6 or 8 inches distance, and the crop allowed to remain till it has perfected its growth in autumn. It will be found an advantage to mix the seed with a certain amount of soil so that it can be more evenly distributed.

	Per oz.—s. d.
CANNELLS' WINNER —It belongs to the stump-rooted class and is of good colour and flavour. Flesh close in texture; a valuable kind for market purposes, and indispensable where a very early crop is wanted	0 8
CANNELLS' FIRST PRIZE —Habit robust, and grows to a good length; skin is very clean and of a deep colour. We have been selecting this for several years, and it is quite worthy of competing with any in commerce	1 0
CANNELLS' PERFECTION INTERMEDIATE —A careful selection of Intermediate Carrot. Roots much longer than the old kind; fine shape; colour a beautiful bright red, of excellent quality, and good for exhibition purposes	0 8
Early Scarlet Nantes —A medium-sized variety	0 6
French Scarlet Horn —Very sweet, and fine for forcing	0 8
Selected Guerande —A French variety of merit, stump rooted, very broad, flesh tender, very little core	0 8
Improved Early Scarlet Short Horn —Very fine for summer use	0 6
Long Red Surrey —A valuable variety for deep soils	0 4
James' Improved Scarlet Intermediate —Good for shallow soils, large size, excellent quality	0 6
Field, Horse, or Cattle Carrots —A useful and profitable crop. All cattle like the roots. Seed should be sown about 8 lbs. to the acre. White Belgian, 2s. per lb.; Yellow Belgian, 2s. per lb.	0 3
Other varieties can be supplied.	

COUVE TRONCHUDA, or PORTUGAL CABBAGE.

BRAGANZA MARROW, SEA-KALE CABBAGE.

Should be sown in March and transplanted in May into rows 2 feet apart, or can be sown in July, keeping the plants in a frame during the winter, and plant out in May, it will then be ready for use in summer. The heart can be used in the same way as the Cabbage, and the thick fleshy mid-ribs of the largest leaves can be cooked like Sea-Kale.

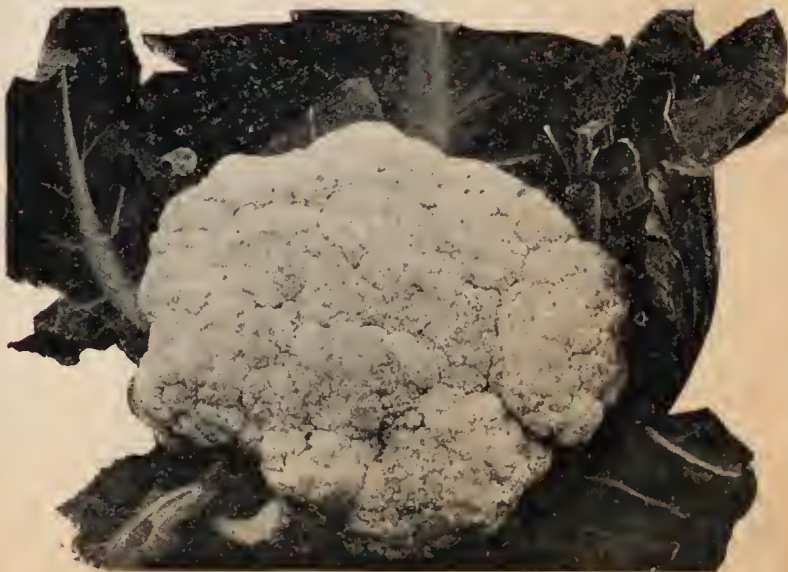

per pkt., 3d. and 6d.; per oz. 0 10

CAULIFLOWER.

CULTURE.—Sow end of January or early in February in a frame on a slight heat, or in a house, so that the plants may be forward and hardened off by April, when a sowing may be made outdoors. From this sowing heads will be produced in July and August. To stand the winter, seeds should be sown about the third week in August. *Cannells' First-to-Cut*, *Early London*, and *Early Dwarf Erfurt* are reliable sorts. Select a sunny, well-drained spot for the seed bed, well work and if at all heavy add a good dressing of fine sandy soil or old potting compost, after which the seed may be sown thinly and broadcast, and covered with fine soil. When the seedlings appear, apply an occasional dusting of soot and lime as a preventive against slugs. The strongest plants, when ready, should be dibbled out rather thickly in hand lights and cold frames, and the remainder left in the seed bed where they will frequently survive an ordinary winter. Finally, plant out in spring.

	Per pkt.	Per oz.
	s. d.	s. d.
CANNELLS' FIRST-TO-CUT —It still maintains its character as being the earliest of all; dwarf, medium-sized heads, colour good and of a most delicious flavour; a gem	1 6	—
CANNELLS' EARLY DWARF MAMMOTH —Fine as a forcing variety, or for the early crop outdoor; close, solid, and pure white heads	1 0	1 9
Eclipse —A favourite in every garden where it has been cultivated. Can be had from August to Christmas, 6d. and	1 0	2 6
CANNELLS' AUTUMN GIANT —Distinct. The heads are beautifully white, firm and compact, and remain longer fit for use than any other kind	1 0	1 6
Late Metropole —Of robust habit, enormous size, and at the same time of excellent shape and delicate flavour. Requires strong soil, and on account of the weight of the head it is often necessary to earth up the plants	1 0	—
Early London —Compact; very early	0 8	1 4
Early Snowball —Dwarf habit with heads of medium size, very compact, and of good flavour	1 6	—
Early Dwarf Erfurt —The best of the earliest sorts. By occasional sowing a supply can be kept up until Christmas	1 0	1 9
Walcheren —Good for general crop	0 8	1 4

For Plants, see page 19.

CANNELL'S EARLY DWARF MAMMOTH.

CANNELLS' PERFECTION INTERMEDIATE CARROT.

CELERY.

CULTURE. In February sow in heat; March and April in open border. Plant in April, May and July, from 2 feet 9 inches to 3 feet between the trenches. A coating of mineral manure to the bottom of the trenches with rotten dung from an old hot-bed, and well water in dry weather. However large Celery may be, it is of little value if disfigured by the ravages of garden pests. It is of the utmost importance that soot, burnt ashes, or even fine soil is banked closely round the stems; too much soot can hardly be used, both to keep away the celery-fly that works its way in and deposits its eggs between the two skins of the leaves, and also to keep slugs from injuring it.

RED VARIETIES.

	Per pkt.—s. d.
Eynsford Red —A grand acquisition for exhibition and table use. Continues quite constant; good strong habit, the stalks are large, thick and of excellent nutty flavour	6d. and 1 0
Early Rose —Stems solid and crisp, of fine walnut flavour. Heads remain a long time fit for use; white heart, delicately shaded with pale rose or flesh colour	6d. and 1 0
Selected Standard Bearer —A splendid red variety, of sturdy compact habit, robust growth, and medium height	6d. and 1 0
Leicester Red —Exceedingly crisp; fine flavour	0 6
Sulham Prize Pink —One of the best pink varieties, close habit, large heart, solid, fine crisp, walnut flavour	0 6

WHITE VARIETIES.

CANNELLS' HEARTWELL WHITE —Unequalled for crispness and sweet nutty flavour; dwarf habit of growth, and very solid heads	6d. and 1 0
Sandringham White —A splendid variety; large, but not coarse; solid, crisp, and juicy	0 6
Invincible White —A vigorous growing sort, very crisp, solid, and well-flavoured. It can be grown for exhibition to an enormous size without running to seed	6d. and 1 0
Celeriac, or Turnip-rooted Celery —Chiefly used in soups	3d. and 0 6
Celery Seed —For flavouring soups	per oz. 0 3

Other varieties can be supplied.

For Plants, see page 19.

CELERY, CANNELLS' EYNSFORD RED

CUCUMBER (Frame).

CANNELLS' IMPROVED TELEGRAPH.

CULTURE.—Nothing is so desirable as good Cucumbers, but attention is required if good fruit is to be obtained. The seeds may be sown in January or February in pots or pans. The temperature of the seed-bed should range from 70 to 80 degrees, never sinking below 60 degrees. Outdoor or Ridge Cucumber should be sown in pots during April, and transplanted in May to a spot previously prepared with well-rotten manure.

	Per pkt.—s. d.		Per pkt.—s. d.
CANNELLS' IMPROVED TELEGRAPH —Flavour excellent, deep green skin, and the fruit of good length. A grand re-selection from the old far-famed variety	6d., 1s. and 2 0	Mortimer's Bounteous —Dark green, very tender and delicate in flavour, fine shape, prolific. Award of Merit	2 0
Cannells' Favourite —A first-class variety, attains a good length	1 0	Rochford's Market —Medium length, colour rich green, spines more conspicuous than in the old <i>Telegraph</i> ; a fine market variety	1 0
Blair's Prolific —A handsome variety of a deep green colour, with no neck; valuable for either Summer or Winter cultivation	1 0	Sensation —Smooth and perfect in outline, with scarcity of neck; handsome dark green colour; a free cropper, and of excellent flavour. First Class Certificate R.H.S.	1 6
Every Day —It is dark-skinned, very handsome in shape, most prolific, and of splendid flavour. First Class Certificate, R.H.S.	1 0	Tender and True —Fine variety for exhibition, handsome fruit of a dark green colour, first-class quality	1 0
Lockie's Perfection —A splendid variety, its chief features being the finest in the <i>Telegraph</i> family with black spine; very free.	6d. and 1 0	Aviator —The fruits are long, smooth and very green	2 0

Other varieties can be supplied. For Plants, see page 19.

CUCUMBER (Ridge or Outdoor).

SELECTED BEDFORDSHIRE PRIZE —A superior variety of fine flavour and appearance; prolific bearer; one of the most useful, and highly recommended	3d. and 0 6	Short Green Gherkin —The one most used for pickling, fruit being only from 3 to 4 inches long	3d. and 0 6
Long Prickly	3d. and 0 6	Short Prickly	3d. and 0 6

CHICORY OR SUCCORY.

CULTURE.—Sow in April in rows a foot apart, thin out to 6 inches in the row. In autumn store the roots in dry sand, and when required at intervals should be placed in soil in a dark place and kept moist. It will give leaves in a few days equal to Endive and cook the same as Sea Kale.

	Per oz.—s. d.
Common (<i>Barbe de Capucin</i>)	0 6
Witloef (<i>Brussels Chicory</i>)—One of the best winter salads grown ...	0 6

CORN SALAD OR LAMB'S LETTUCE.

Very useful during winter and spring for Salads, and especially when outdoor Lettuces are about finished, for which it is an agreeable substitute and change.

	Per oz.—s. d.
Italian—Broad-leaved	0 6

CRESS (Pepper Grass).

CULTURE.—Plain and Curled Cress should be sown weekly during the whole year, if a regular supply is required, the state of the weather regulating the method of sowing. As a rule, from November to March, a gentle hot-bed is the best. Australian Cress sown in the open border during March and April, and in a cool and shady place in May, will produce crops in succession; and if sown under a north wall in September and October, with a little protection, will afford a supply during winter and spring. Water Cress may be easily grown in a damp and shady place, and on no account must suffer from drought. Sow in March and April.

	Per qt.	Per pt.	Per oz.
	s. d.	s. d.	s. d.
Fine Curled—Useful for garnishing and salads ..	1 9	1 0	0 3
Plain or Common—The best for general use and salads	1 9	1 0	0 3
American or Land—Perennial variety, similar in flavour to Watercress	—	—	0 3
Australian or Golden Salad—Very tender; mild flavour	—	—	0 3
Water Cress... ..	—	per pkt., 6d.	—

HERBS, GARNISHING PLANTS, &c.

3d. and 6d. per packet, except where mentioned.

CULTURE.—Sow in pans in a cold frame about first or second week in March; afterwards transplant into prepared beds, or the seeds can be sown the first week in April on warm border or outdoors.

- b* **Angelica**—For flavouring. Leaf stalks can be blanched and eaten as Celery, or preserved with sugar.
- a* **Anise**—For seasoning and garnishing.
- p* **Balm**—Aromatic plant. Used in salads, making Balm Tea or Wine.
- a* **Basil, Sweet** } Excellent for flavouring soups and salads.
- a* **Bush** }
- p* **Borage**—Used for summer drinks; excellent for bees.
- p* **Burnet**—The young leaves have a fine flavour.
- b* **Caraway**—Seeds used in confectionery, lower leaves can be put in soups.
- b* **Chervil, Curled**—For salads.
- Chives**—For soups and salads. Per pkt., 6d. and 1s.
- a* **Clary** (*Salvia sclarea*)—For seasoning and soups.
- b* **Corn Salad or Lamb's Lettuce**—A hardy, useful salad. Per oz., 6d.
- Dandelion**—Improved large thick-leaved. Per pkt., 3d. and 6d.
- b* **Dill**—Leaves used in pickles and sauces.
- p* **Fennel**—For garnishing and fish sauce.
- p* **Horehound**—For the cure of asthma; also for seasoning.
- Horseradish**—See page 20.
- p* **Hyssop**—Leaves and shoots used for pot-herbs, also medicinally, aromatic.
- a* **Ice Plant**—Fine for garnishing.
- Indian Corn**—See Maize.
- Kale**—See Borecole.
- Lamb's Lettuce**—See Corn Salad.
- p* **Lavender**—Grown for its sweet-scented flowers. Used in sauces.
- p* **Marjoram, Sweet or Knotted** } Used in soups and stuffings, also
- p* **Pot or Perennial** } when dry for winter use.

EGG PLANT.

	Per pkt.—s. d.
Cardinal—Medium-sized oval-shaped fruits, bright scarlet	3d. and 0 6
Black Pekin. White. New York Purple. Mixed.	—
Each, per packet, 3d.	—

ENDIVE.

CULTURE.—For autumn use sow end of April or during May, on prepared soil, in drills a foot apart, and thin out to 6 inches from plant to plant; water in dry weather. If a winter and early spring supply is needed, sow in July and August, and transplant to frames, or a sheltered position, secure from frost.

	Per oz.—s. d.
Cannells' Green Curled—The one mostly cultivated for general crop; very crisp and hardy	0 6
Moss Curled—Beautifully curled, like Moss	0 8
Green Batavian—Large and fine	0 8
Improved Round-leaved Batavian—Very compact; forms a nice heart, blanches easily	0 8
White Curled—Very tender when young	0 9

GARLIC, see page 20.

GOURD, PUMPKIN OR SQUASH.

CULTURE.—Same as Vegetable Marrow. Some of the ornamental varieties can be trained over arches, &c.

	Per pkt.—s. d.
Cucumis Eriaceus (<i>Hedgehog Gourd</i>)—Bristly green	0 6
— Grossularia (<i>Gooseberry Gourd</i>)—Green, striped grey	0 6
Depressa Striata—Olive-green, striped with silvery bands and marbled with grey; can be sliced up and used in salads	0 6
Lagenaria (<i>Hercules Club</i>)—Nearly 3 ft. long	0 6
— (<i>Bottle Gourd</i>)—Creamy white	0 6
Turk's Cap (<i>Collage Loaf</i>)	0 6
Cannells' Hundredweight, or Mammoth—The largest in cultivation, often attaining an incredible weight	0 6
Ornamental Mixed—Many curious and pretty kinds	0 3

- p* **Rosemary**—Sprigs for garnishing; leaves for making a drink to relieve headache.
- Rampion**—For salads
- p* **Rue**—For garnishing; also useful for poultry. A medicinal herb.
- p* **Sage**—For stuffing and sauce.
- a* **Savory, Summer** }
- p* **Winter** } For seasoning; also useful in a dry state for winter.
- p* **Sorrel**—Used like Spinach; also in sauces and salads.
- Tarragon**—Used for flavouring in soups.
- p* **Thyme**—For soups and seasoning, also stuffing.
- p* **Wormwood**—Used as a tonic when taken in tea.

a Annual. *b* Biennial. *p* Perennial.

For Plants, see page 20.

KOHL RABI (Turnip-rooted Cabbage).

It likes a good, enriched soil, and should be sown from March to June in drills two feet apart and thin out to one foot between plants, or can be carefully transplanted into rows the same distances as above.

	Per oz.—s. d.
Early Green Vienna } Specially selected for kitchen garden	—
Early Purple Vienna } purposes	0 8

We can also supply the large green Kohl Rabi for agricultural purposes, 3s. per lb.

CANNELLS' EXHIBITION GIANT COS.

LETTUCE.

CULTURE—Sow from the first week in March till September for succession. When 3 inches high, remove the strongest plants to prepared ground, and plant them in rows from 1 to 2 feet apart, according to size. For spring use sow in autumn, prick out in frames, and transplant early. After being planted they should never be allowed to suffer from the want of water. For very early use sow a little under glass during February.

COS VARIETIES.

	Per pkt.	Per oz.
	s. d.	s. d.
CANNELLS' EXHIBITION GIANT COS—Larger and finer in every way than the best types of Cos Lettuce	3d. and 0 6	1 0
ECLIPSE COS—Distinct. The dwarfest Cos Lettuce, and produces a firm, crisp heart, quicker than other sorts	1 0	—
Bath Cos (Black Seeded)—Best for autumn sowing	3d. and 0 6	0 9
Paris White—Of immense size and superior quality	0 4	0 8
Hlek's Hardy White—Suitable for sowing in autumn	3d. and 0 6	1 0

" three " " " " " "	1 6

LEEK.

CULTURE—For an early crop sow in a pot, pan, or box, early in February, and place in a frame or a slightly-heated place, and when the plants are 3 or 4 inches high, prick out in a sheltered position or frame in rich soil. Here they are to remain until good-sized plants are formed, and then transplanted to their permanent quarters. Leeks of very fine quality and good enough for ordinary use, may be obtained from seed sown the first week in March, broadcast, on a warmer boarder, and cover lightly with mellow soil. Transplant, when large enough, in rows 18 inches apart, and about 8 inches in the row. Prepare trenches and earth up in the same way as Celery. Use mineral manure.

CANNELLS' MAMMOTH—A superior kind, very hardy, blanches well, and grows to a large size; a splendid exhibition variety	4d. and 0 8	1 4
Champion—This Leek has gained many honours	6d. and 1 0	1 6
The Lyon—A thoroughly distinct variety, matures early, grows to a great size and weight without coarseness. The white part, when blanched, often exceeds 16 inches in length and 9 inches in circumference	6d. and 1 0	1 6
Giant Ayton Castle—A very large and fine variety	3d. and 0 6	1 0
Musselburg—Large Scotch; finest stock	3d. and 0 6	1 0

Other varieties can be supplied. For Plants, see page 19.

CANNELLS' MAMMOTH

MAIZE or INDIAN CORN.

This should be more generally grown as a vegetable in this country. As its cultivation is not difficult, and it is not necessary for the seed or cobs to become hard before gathering, they should be made use of when in a green state, or just when passing out of the milky state, and only directly they are required for use. Boiled and served with a suitable sauce, they are quite enjoyable. Sow in April in a gentle heat, and when sufficiently hardened and all danger of frost is over, plant out in a warm position about 18 inches to 2 feet apart.

Cannells' Early Dwarf Sugar, Adam's Early, Early Minnesota, each, per pkt., 3d. & 6d. Other Varieties can be supplied.

MERCURY—(Good King Henry)—(Chenopodium Bonus Henricus).

A perennial vegetable much grown in Lincolnshire. The shoots when boiled are tender and much like Asparagus, and the leaves are very useful in place of Spinach. Seeds may be sown in March in drills a foot apart, and then thin out to 9 inches in the rows per pkt., 6d. & 1s.

MUSTARD—(Cruciferae).

CULTURE.—Sow every fortnight for succession in boxes, in heat when too cold out of doors. On account of making such rapid growth, should be sown about a day or two later than Cress, when they are required to come in together for cutting.

Cannells' Eynsford White—A splendid, carefully-selected and improved form of the old variety, so generally grown for salads. (Cheaper by the peck or bushel) per quart, 1s. 6d.; per pint, 9d.; per oz. 2d.

Chinese—Leaves and stems much larger than the common variety, black seeded „ 3d.

MUSHROOM SPAWN.

A reduced Price for large quantities.

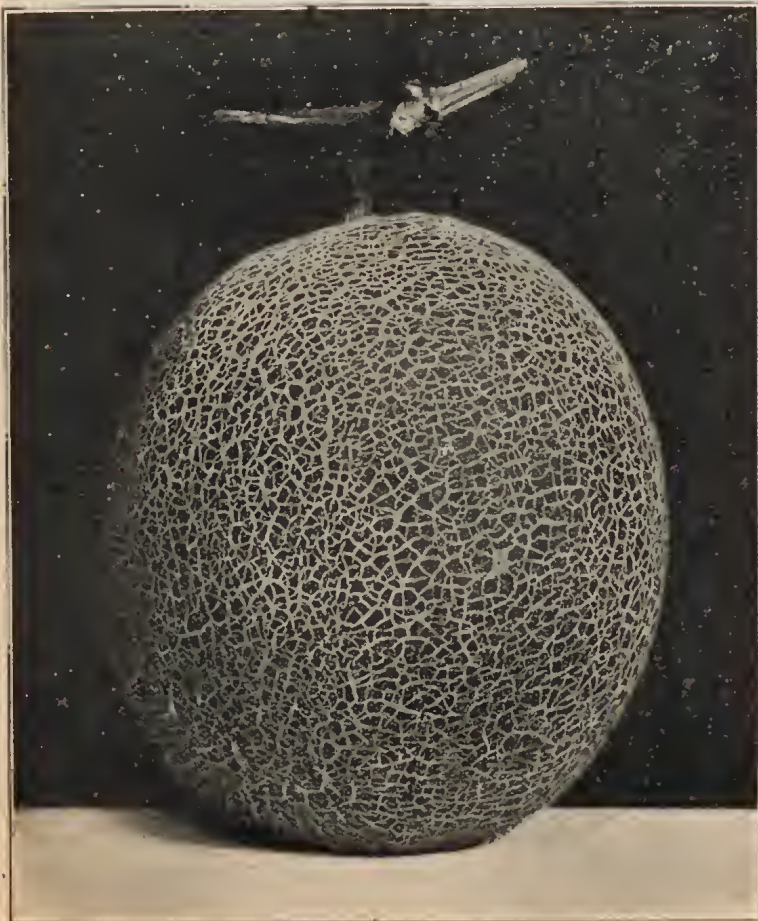

Having every facility, and to be quite sure that nothing but the best shall come from us, we collect samples from all reliable sources where manufactured, immediately test which is the best, and purchase accordingly and have specially prepared for us; consequently, all our customers succeed, most of them far above their expectations. At this moment we have a splendid fresh stock.

Per brick, 4d., postage 4d.; per peck, 1s. 4d., postage 7d.; per bushel of 16 cakes, 5s.

A PRACTICAL TREATISE ON THE CULTIVATION OF MUSHROOMS, By F. J. Barter.

Price 1s., Post free, 1s. 2d.

By using Cannells' Perfect Mushroom Spawn they can be had all the year round.

NEW MELON, KING GEORGE.

MELON.

CULTURE.—Similar to that of the Cucumber, but requiring several degrees more of heat which must be maintained with regularity. A quick growth should be encouraged during the earlier stages, and when about 1 foot or so high the tips should be pinched out, causing them to come stronger, and the fruit sets more freely. As a rule they are in perfection just before the stems come away easily from the fruit. The soil should be kept firm and solid throughout the growth they prefer a rich fibrous loam.

	Per pkt.—s. d.
Blenheim Orange—Scarlet flesh, delicious flavour	1 0
Diamond Jubilee—Oblong in shape, beautifully netted, golden yellow when ripe. Flesh greenish white, flavour excellent ...	1 0
Earl's Favourite—Green fleshed, delicious flavour; a strong grower and free setter; does quite as well in cool frames as in the houses	1 0
Golden Beauty—Remarkable for its deep flesh of rich salmon with a bright golden skin beautifully netted	1 6
Hero of Lockinge—Handsome fruit, skin rich golden, regularly netted with white. Flesh almost white, exquisite flavour 6d. &	1 0
King George—A first-class variety, it is beautifully netted, emits a rich aroma, and is particularly thick in the flesh; colour, rich orange scarlet throughout, outside skin dark green; can be grown with or without heat	1 0
Munro's Little Heath—Easily cultivated, very prolific, and one of the hardest. The flesh is scarlet 6d. and	1 0
Read's Scarlet Flesh—One of the most exquisite-flavoured Melons in cultivation, beautifully netted	1 0
Royal Sovereign—Free setting, beautiful golden yellow, slightly netted, flesh white, tinged green; very deep. Award of Merit, R. H. S.	1 0
Taunton Hero—Round in shape, lightly netted, and bright golden yellow in colour. The flesh is white, deep, melting	1 0
Cantaloup—Suitable for growing outdoors in tropical and sub-tropical countries 6d. and	1 0

Other Varieties can be supplied.

FOR PLANTS, SEE PAGE 19.

CANNELLS' PRIZE MEDAL ONIONS.

AWARDED MANY GOLD AND SILVER MEDALS.

CULTURE.—The ground should be double dug in October or early in November. The ground can then be left in its rough state until early in January, when a good dressing of soot may be spread over the surface, which is not only a preventive for the maggot, but a valuable stimulant for the Onion throughout the different stages of its growth. Nothing more should be done until the end of February or March, when (weather permitting) the beds should be pointed over, well raked, and rolled or trodden down firm, and the seed drilled in rows 1 foot apart, which leaves ample room for a draw-hoe, which cannot well be used too often, if care be exercised to avoid any injury to the tops. As soon as the Onions are up and well established thin out to 9 inches apart, and during an early stage of their growth a liberal top-dressing of spent Mushroom bed manure would be beneficial in keeping the ground moist and cool in hot, dry seasons, and saving a considerable labour in watering. When they are in full growth a dressing of our "Real Manure," 2 ounces to the yard, will do wonders for them, especially if well watered in, should the weather be dry. Soot sown broadcast in showery weather will help to keep down the mildew and also encourage growth. For what are termed Tripoli or Winter Onions, sow early in August and transplant the following spring. Onions may be grown on the same piece of land for years if good tillage is kept up every season. By sowing the Tripoli or autumn Onions early in August, and transplanting the seedlings in due course, followed with a sowing, weather permitting, of *Early Eight Weeks* in February, and then again with the spring varieties, it is possible by this method to have Onions throughout the year.

ONION, AILSA CRAIG.

SPECIALLY SELECTED EXHIBITION VARIETIES.

Seeds saved from the finest Exhibition and most typical Bulbs.

	Per pkt.—s. d.
THE GIANT —Of beautiful globe shape, and larger than either <i>Ailsa Craig</i> or <i>Excelsior</i> ; very heavy, solid, of excellent flavour, and a first-class keeper; pale yellow in colour	1 6
CANNELLS' AILSA CRAIG —One of the largest and most beautiful kinds; bulbs vary from almost a globe to a deep flat oval shape, are of a pale straw colour per oz., 2s.	1 0
Cocoa-nut —Skin is very delicate pale straw colour, flesh white and very mild; useful for exhibiting in collections 6d. and	1 0
Improved Wroxton —May be grown to a large size; delicate light brown straw colour; egg-shaped and quite distinct 6d. and	1 0
Cranston's Excelsior —Small neck, globe-shaped; pale straw 6d. and	1 0
Reading Improved —Beautiful shape, mild flavour; keeps good for a long time; useful for the exhibition stage 6d. and	1 0
CANNELLS' GLOBE —Very globular, and of a deep rich straw colour; attains a large size	1 6

Plants of Exhibition Varieties raised under glass in the spring and specially prepared in pots, of all the finest kinds.

See page 19.

FOR PLANTS, SEE PAGE 19.

PARSLEY.

CULTURE.—Should the weather be dry, sow early in February; if not, defer till middle of March. Sow again in May, and also July, for furnishing plants to stand over winter. Parsley seed is rather longer than most seeds in germinating and should be watered in dry weather if necessary. The secret of having it good all the year is to sow in good soil, 16 inches from plant to plant.

Per pkt. Per oz.
s. d. s. d.

CANNELLS' EYNSFORD BEAUTY—A beautiful kind. For garnishing and exhibition purposes this will meet all requirements. Well adapted for pot culture; compact habit ... 3d. and

Myatt's Garnishing—A splendid variety; very double ... 0 4

PARSNIP.

CANNELLS' FIRST PRIZE.

CULTURE. Sow about the second week in February, or first in March, or as early as the ground is in a fit state to receive the seed, choosing a light deep-trenched soil if possible; and if required for exhibition, make a hole 3 feet deep with a crowbar, push this round so that the hole is largest at the top, fill with fine soil, and finish off with dibbling in three seeds. After germinating leave the strongest seedling, assist them when in full growth, make four holes a foot deep in the soil and about 5 inches away from the plant, which can be occasionally filled up with liquid manure. They should be allowed to remain in the ground as long as the weather permits, and when lifted should be carefully placed in sand.

Per oz.—s. d.

CANNELLS' FIRST PRIZE—A grand variety for exhibition; skin smooth and well blanchd; of splendid shape, and tapering off with perfect regularity, per packet, 4d. 0 8

CANNELLS' STUDENT—A first class variety for the garden ... 0 6

CANNELLS' HOLLOW CROWN—A selected stock producing long, clean, and smooth roots, free from side shoots; very tender ... 0 4

OUR STOCK IS GROWN FROM ANNUALLY
SELECTED ROOTS ONLY.

KITCHEN & EXHIBITION SEED POTATOES

(DIRECT FROM SCOTLAND).

SPECIALLY GROWN AND SELECTED FOR SEED, AND
TRUE TO NAME.

Those marked with a * are good Exhibition varieties.

It is absolutely necessary that full Rail Address should accompany
all orders for Potatoes.

CULTURE.—Consider the condition of the soil—if rich, pulverize it by digging two, three, or four times. Plant early, before the strong eyes at the principal end start growing. Do everything possible so that the foliage is in no way injured. Take up early. Never clamp up tight until frosts set in—this prevents premature growth. Peel with a proper peeling knife. Do this every evening, and let them lie in water all night, and you certainly cannot fail to have mealy, beautiful eating Potatoes when cooked.

RADISH.

SAVED FROM TRANSPLANTED AND SELECTED ROOTS ONLY.

CULTURE.—To have early, sow in frames near the glass in January; in the open ground in February, and every fortnight till August. To obtain crisp, sweet-eating Radishes they must be grown quickly. The Turnip-shaped varieties are the best for winter culture.

	Per oz.—s.	d.
Earliest Scarlet Short-top Turnip—Very useful for early forcing; rapid growth ...	per pint, 2s.	0 6

RHUBARB (Seed).

Seed of this family is preferable for sending abroad. Sow in March on a light rich soil in drills about 2 ft. apart: thin out, allowing the strongest plants to remain 10 to 16 inches apart.

Champagne. Early Red. Royal Albert. Victoria. Finest Mixed. 6d. per packet.

Rhubarb Roots, see page 20.

SALADS.

We supply seeds of plants generally used at various times of the year in the preparation of this now recognised necessity on the dining table. Descriptions will be found under the various headings—Barbe de Capucin, Celeriac, Chervil, Chicory, Chives, Corn Salad, Cress, Cucumber, Dandelion, Endive, Lettuce, Mustard, Nasturtium, Purslane, Radish, Rampon, Salsafy, Shallot, Tarragon, Tomato, Watercress, Witlof.

SALSAFY (Vegetable Oyster).

Although Salsafy is not usually cultivated in small gardens, there is no reason why it should not be, as the roots form a valuable addition to the somewhat limited list of winter vegetables. They are easily cooked, merely require scraping, steeping in vinegar and water, then boiled until tender, after which they may be served up with white sauce.

Per oz.—s. d.

CANNELLS' MAMMOTH—Best quality ... 0 9

SPINACH.

CULTURE.—Should the weather be favourable, a small sowing of the round variety may be made in January, another in February, and a larger one in March. Successive sowings may then be made every three weeks till the beginning of May, and afterwards weekly to the end of July. For winter use, sow the prickly variety weekly during the first three weeks in August. The *New Zealand* should be sown in heat and transplanted, and be protected till the beginning of June, when it may be planted out without shelter.

CANNELLS' EYNSFORD FAVOURITE.—A great advance on the old round form of Spinach, well adapted for winter and summer sowing ... per pint, 1s. 4d. 0 4

Prickly or Winter—For winter use per qt., 1s. 9d.; per pt., 1s. 0 2

Round or Summer—For summer use ,, 1s. 9d.; ,, 1s. 0 2

New Zealand—Should be sown in February in heat and transplanted in June ... 0 6

Orach or Mountain—Quite distinct ... 0 6

Perpetual Spinach, or Green Beet—Furnishing leaves in great abundance, should be regularly picked so as to encourage good growth; leaves are quite green ... 0 6

TURNIP (Garden).**SCORZONERA.****CANNELLS' SELECTED.**

The roots are boiled or stewed in the same way as Parsnip. A delicious vegetable.

10d. per oz.

SEA KALE (Seed).

CULTURE.—Sow in March or April in rows, about 15 inches apart, and keep the plants clear of weeds. Transplant to good, well trenched, and rich ground, in clumps of about four or five, and between each lot so planted leave a space of about 3 feet, so that any one can move between them during the growing season.

9d. per oz.

For Plants, see page 20.

SHALLOTS

See page 20.

SEA KALE.

STRAWBERRY (Seed).

CULTURE.—Seed may be sown in slight heat during the end of January and February, or if strong plants are required early in the next year, seed may be sown in September in a cold frame. When large enough, plant out in beds in the usual way as required.

Choice Large Fruited Varieties, Mixed, saved from the best kinds only. Per pkt., 6d. and 1s.

CULTURE.—Sow in March, April, and once a month till the end of August. Sow *See-Weeks* and *Snowball* till May; they are the best for early use.

SEED SAVED FROM ONLY THE FINEST SHAPED AND MOST SOLID BULBS.

Orange Jelly—One of the best	1 6	0 3

CANNELLS' EARLY SIX WEEKS.

TOMATO, or LOVE APPLE.

CULTURE—Sow in February or March in heat, pot, and gradually harden off, so that they may be ready to plant out the latter part of May to a sheltered location. For indoor purposes, get good plants in 4 or 5-inch pots; when they show a truss of flower they require fertilising or setting with a camel-hair brush. As soon as the fruit is formed, plant them out in ordinary good soil, 12 inches from plant to plant, pinch out all side shoots, and preserve the large leaves; if fruit fails to form, apply pollen at once, so that the plants bear fruit from bottom to top. Pick fruit as soon as ripe, and never select any other than fruit full of seed; ill-formed ones are disappointing, and often get seedsmen and gardeners in bad repute on this account.

SUNRISE.

Swanley Superlative—Of globular form, rich colour, and a heavy cropper. Continues fruiting for a long period ... 6d. and 1 0

Tuckswold Favourite—Dwarf compact habit, fruit round, smooth, handsome, brilliant red colour, medium size ... 6d. and 1 0

Queen Alexandra—Large fruit, perfectly smooth and symmetrical, splendid colour, 6d. and 1 0

Sunrise—Rich scarlet; one of the earliest. First Class Certificate, R.H.S. ... 6d. and 1 0

VEGETABLE MARROW.

CULTURE—The seed may be sown in a slight heat at the end of March, and shifted from the pots about the middle of May, then select an open piece of ground and throw out holes from 2 to 3 feet square and 1 foot deep, which should be at least 12 feet apart, the soil thrown out being used to raise the sides. A layer of dry leaves or litter should be spread over the bottom, and afterwards a sufficient quantity of ordinary good soil, wherein a small portion of leaf soil and spent manure has been mixed, to relish it. The plants being hardened off, should receive at the time of planting a good watering, and be shaded and protected as long as necessary. Planted off in this manner they make firmer and shorter jointed growth, are more prolific, less water required, and not so liable to go off when in full bearing, as often happens under a more forcing treatment. They can also be grown with success outdoors by putting in a few seeds the first week in May, where they are to remain.

CANNELLS' CREAM—Splendid for exhibition ... 3d. and 0 6

CANNELLS' EARLY PROLIFIC—A heavy cropping kind, setting its fruit quicker than some varieties ... 3d. and 0 6

ONIONS, PLANTS.

Small Plants out of Boxes, and Plants in 2½-in. pots, well-hardened off and ready for planting out first or second week in April.

Owing to the increasing demand for our Onion Plants, we have made special preparations for growing the undermentioned exhibition kinds in small and large plants, the former in boxes and the latter in pots; these we strongly recommend to our customers as having received no check in their growth, ultimately make the best plants and the finest exhibition bulbs.

We should esteem it a favour, when it is possible, for customers to order all potted Plants before the 1st April, otherwise we cannot guarantee to supply.

CANNELLS' LAWN GRASS SEEDS.

Fresh, Well Cleaned, and Perfect.

For PARKS, TENNIS LAWNS, TERRACES, CRICKET GROUNDS, PLEASURE GROUNDS, BOWLING GREENS, GOLF LINKS, TOWN LAWNS, UNDER TREES, &c.

THERE is nothing more essential to a rural or a suburban residence than a beautiful lawn with its close velvety turf. In sowing down a lawn be sure the soil is perfectly clean, and if poor a good dressing of loam should be well spread over about three or four inches deep. After being well rolled and raked very fine the seed may be sown broadcast and as evenly as possible then rolled down. In a few weeks the grass will appear and be ready for cutting, which operation should be often performed, using the scythe until the lawn be well established, when it may be cut with machine and rolled as frequently as required. It should be sown in April, May, August and September, always taking advantage of the most suitable weather.

	Per lb.	Per peck.	Per bushel.
	s. d.	s. d.	s. d.

HARDY ANNUALS may be sown from February till the end of September; March, April and May are the best months for general summer display; June and July for autumn blooming; August and September for spring flowering. **HALF-HARDY ANNUALS**—Sow from the beginning of March to the end of May; place in a frame on a gentle bottom heat. When sowing from the middle of April to the end of May they may be easily raised without artificial heat, and by selecting a warm, sheltered situation, and covering them with a hand-light till they are strong enough to bear transplanting.

BIENNIALS AND PERENNIALS—The most select and tender varieties for summer and autumn blooming may be sown in a gentle heat in March and April, and pricked into pots until fully established, and then potted off singly, or transplanted into the open ground, as required. The hardier varieties may be sown in the open ground, in prepared beds in June and July, and when strong enough transplanted to where they are intended to bloom the following year.

HERBACEOUS PLANTS are those Perennials which lose their stems annually, whilst the roots continue alive in the ground.

AGERATUM—CANNELLS' DWARF.

		Per pkt.—s. d.			Per pkt.—s. d.
159	<i>Aquilegia</i> , Columbine—Long-Spurred Hybrids —Most beautiful in habit of growth, colours, and form of flowers. After several years' careful selecting and re-selecting, we have obtained a splendid strain, which we now offer to all admirers of this graceful and delightful flower, hp.... 6d. and	1 0	169	<i>Aretotis</i> Grandis —The ray florets pure white on the upper surface narrow yellow zone at their base, reverse of petals pale lilac, lha, 2 ft.	0 6
160	— Californica Hybrida —Large, centre petals yellow, deep orange-red sepals and spurs, hp, 2 ft.	1 0	170	<i>Aristolochia</i> Elegans —A free-flowering species of neat growth. Can be grown in the stove or warm greenhouse, gp.	1 0
161	— Chrysantha —Beautiful yellow, hp, 2 to 3 ft. 6d. and	1 0	171	<i>Artemisia</i> Sacrorum Viridis (Summer Fir) —A new ornamental foliage plant, introduced from China. It is an annual, and forms pyramid bushes from 3 to 5 ft. in height. As a pot plant it is very pretty, and may be successfully grown in groups and borders similar to <i>Kochia scoporia</i> . The colour of the finely pinnated foliage is a rich dark green. As the season advances the similarity to the Fir becomes more pronounced. The cut branches last a long time and may be used for wreaths, decoration, &c.	1 0
162	— Cœrulea Hybrida —Flowers are large, sulphur-yellow and pale blue, hp, 2 ft. 6d. and	1 0	172	<i>Aselepias</i> Curassavica Reddish orange-scarlet; useful for button holes, sprays, and table decorations, gp, 2 ft. ...	0 3
163	— Fl. Pleno —Shades of yellow, light and dark blue and white, all being of the so-called long-spurred type, hp.	1 0	173	<i>Asparagus</i> Plumosus —Most useful for pots or bouquets, lhp, 2½ ft. 1s. 6d. and	2 6
164	— Glandulosa (Grigor's Variety)—Tips of petals white, sepals dark blue, large; beautiful, hp, 1½ to 2 ft. ...	1 0	174	— Sprengerii —A handsome greenhouse variety of rapid growth, drooping naturally and gracefully from pots or hanging baskets 6d. and	1 0
165	— Grandiflora Alba —Pure white; one of the best for cutting, hp, 2 ft.	0 6	175	<i>Asperula</i> Odorata (Woodruff) — White, sweet-scented flowers, dwarf; thrives well in the shade, hp.	0 3
166	— Skinneri —Red, with tips of the petals yellow, hp, 2 to 3 ft.	1 0			
167	<i>Arabis</i> Alpina —For permanent edging or spring bedding one of the best plants in cultivation; flowers white, hp, ½ ft. ...	0 3			
168	<i>Aralla</i> Sieboldii —Handsome, ornamental foliage plant, gs, 3 to 6 ft. (New seed ready in April	0 6			

Our **ASTERS** are known and celebrated as the best.

AWARDED SEVERAL SILVER AND SILVER-GILT FLORAL MEDALS BY THE ROYAL HORTICULTURAL SOCIETY.

CULTURAL DIRECTIONS.—Sow Aster Seed in February and March in pots, or on a spent hot-bed in drills, 4 inches apart. Soon after the plants are up prick out into a cold frame or under hand-glasses, 3 to 4 inches apart, from whence they can be planted out when 4 inches high. Select showery weather for planting, when the ground is in good working order; plant out in rows 1 foot apart each way. To grow Asters to perfection a rich deep soil is indispensable, and during dry weather they should be watered, and a top dressing of well-rotten manure applied early in August. Be very particular that they are always thoroughly free from insects when they are planted out, otherwise the leaves will become curled, and vigour and protection lost for the season. If required for exhibition the buds should be thinned, and the plants well watered with liquid manure. During the last fortnight cover with glass.

- Per pkt. — s. d.
- COCARDEAU, or CROWN ASTER**—A very striking and distinct class, each flower having a white centre surrounded by rose, crimson, blue, &c., hha, 1½ ft.

CANNELLS' TUBEROUS BEGONIAS.**THE GOLD CLOCK COLLECTION.**

Tubers in the dormant state supplied from the end of October
until March.

Scatter the seed on a level, moderately-firm surface, cover with glass and
paper, keep it in darkness until germinated; sow and place in heat at any
time of the year, or as soon as the seed is ripe; pot the young seedlings off
as soon large enough, and re-pot when necessary; in three or four months they
begin to display their beautiful blooms.

CALCEOLARIA.

CALCEOLARIAS.

AWARDED THE GREAT SILVER CUP.

Sow in August, and from the moment they are up do everything to keep them growing. Rain water is absolutely necessary. Let them be carefully shifted from the small pot to the 5-inch. Let the night temperature and moisture be such as to cause a nice refreshing dew to stand on the surface of the leaves every morning. This wards off insects and gives vigour to the plant, but it should be dispelled during the day by the admission of air. Keep all green fly away, if coddled in a house, they are almost sure to be attacked. If so, the most effectual means must be adopted by placing them in a lofty position and fumigating. As soon as the first root appears at the drainage hole, let them be shifted intact and without injury into their blooming pots, making sure that every pot is well drained, for no plant is more liable to become sickly and yellow in wet sour soil than the Calceolaria. As soon as the pots become well filled with roots, give liquid manure once a week, and stake out and fumigate thoroughly just before they show flowers, and the result will be a grand sight. Apply soot and bone meal to give darker foliage.

They are extremely free-flowering and invaluable for cut flowers. If sown early in spring, will bloom during September and October: in splendid mixture ... 1s. and 1 6

CINERARIAS.

CANNELLS' CINERARIAS.

If required to flower in winter, seed must be sown in May or June. The secret of growing well is to grow fast, never allowing them to receive a check, either from being pot bound, dryness of root, or attack of insects, the cooler they are kept the better, just preventing frost reaching them, and giving abundance of air. If the green aphid is not kept thoroughly away there will not be a bloom worth seeing. Of course at all times the keenest observation of extreme temperature must be made for cold, cutting draughts or a too glaring sun.

Per pkt.—s. d.

- 408 **Cinerarias, Cannells' Star (Stellata)**—The 20th Century Strain. An acquisition for conservatory decoration. Many have a most agreeable scent, and when cut they last long in water... 1s. and 1 6

CYCLAMEN, CANNELLS' PERSICUM.

OURS ARE THE FINEST AND NEAREST
TO PERFECTION EVER SEEN.

Awarded a Silver Medal by the Royal Horticultural Society
for our Strain.

Awarded a Silver Gilt Medal for a Collection of Plants and a
Certificate of Merit for the Strain, Royal Horticultural Society.

Sow seeds thinly, in a compost of two parts turfy yellow loam, one of peat and leaf-mould mixed together, and one part of thoroughly decayed cow-dung sifted very fine, and a little silver sand; cover the seeds to the depth of a quarter of an inch; place the pots on a shelf in the greenhouse, near the glass in the winter, and in summer in any shaded pit. Under no circumstances must the surface of the soil become dry. Some of the seeds take four months to germinate.

Per pkt.—s. d.

- 446 *Papilio, White Swan*—The large bright white orchid-like fringed flowers are very attractive, and worthy to rank among the very best ... 1s. 6d. and 2 6

- 786 *Gloriosa*—A pleasing rich lake colour ... 1s. and 1 6
- 787 *Masterpiece*—A beautiful clear blue. Grand Improvement, 1s. 6d. and 2 6
- 788 *Scarlet Gem*—Bright scarlet crimson flowers, very free, 1s. and 1 6
- 789 *White Spray*—Where a mass of pure white is required either in the greenhouse or conservatory this is of surpassing beauty and effect ... 1s. and 1 6
- 790 *Blue*—Grand addition to this class ... 1s. 6d. and 2 6
- 791 *Lady E. Dyke*—Of the purest white; small yellow eye; free-flowering, even when grown in small pots; retains its blossoms for a long time ... 1s. and 1 6
- 792 *Miss Irene*—Light foliage, salmon-pink of a very pretty shade, much admired ... 1s. and 1 6
- 793 *Mrs. H. Cannell*—A fine improvement, producing pure white flowers ... 1s. and 1 6
- 794 *Salmon Beauty*—Dark foliage, rosy salmon, very bright, 1s. and 1 6
- 795 *The Lady*—The forerunner of this class; beautiful dark foliage and stems, pure white star-like flowers, and bright yellow-centre ... 1s. and 1 6
- 796 *Cannells' Stellata, Mixed (Pyramidalis)*—All the above named ... 1s. and 1 6

Cannells' Primula Stellata Hybrida.

Intermediate in form of flowers and growth between the ordinary *Sinensis* and the *Lady* or *Stellata* type. Free-flowering and effective.

- 797 *Countess of Radnor*—A splendid variety, producing red coloured flowers in great profusion ... 1s. 6d. and 2 6
- 798 *Mrs. R. W. Cannell*—A superb and delightful variety, flowers of a snowy whiteness. The rich colouring of the foliage and stems is most attractive ... 1s. 6d. and 2 6

- 799 *Double Pyramidalis Alba*—The innumerable quantity of pretty well-shaped semi-double pure white flowers produced on even small plants is most remarkable ... 1s. and 1 6

PRIMULA SINENSIS, LARGE-FLOWERED.

Primula Sinensis, Large-Flowered.

- Per pkt.—s. d.
- 800 **Cannell's Pink**—A very beautiful and handsome variety of a most lovely pink shade; flowers very large and perfect in habit 1s. 6d. and 2 6
- 801 **Mrs. Jean Ward** (Semi-double)—The large flowers are borne well above the foliage, the colour of which is a beautiful rosy purple shade 1s. 6d. and 2 6
- 802 **Herbert Bennett**—Fine large blue, of good habit, and fern leaf foliage 1s. 6d. and 2 6
- 803 **Mrs. Gregory**—Produces good size flowers of a pleasing shade of salmon; semi-double 1s. 6d. and 2 6
- 804 **Queen Alexandra**—Pure white flowers, dark green foliage, 1s. 6d. and 2 6

- Per pkt.—s. d.
- 813 **Sparkler**—Medium-sized flowers, of a most intense shade of crimson-red, bright and effective 1 6
- 814 **Eynsford Yellow**—Pure white, large yellow centre; habit good and very uniform 1s. 6d. and 2 6
- 815 **White**—Of the purest white and highest quality flowers; habit good; very free 1s. 6d. and 2 6
- 816 **White Perfection**—A most lovely variety, very dark stems, grand fern-leaf foliage 1s. 6d. and 2 6
- 817 **Finest Large-flowered, single, mixed**—Containing nearly all the above kinds 1s. 6d. and 2 6
- 818 **Primula, Fringed, double, mixed** 1s. 6d. and 2 6

PRIMULA.

Primula Sinensis, Large-Flowered—continued.

- 805 **Orange King**—Orange-salmon and terra-cotta, a new colour 1 6
- 806 **Crimson King**—Deep rich crimson, dark brown eye, 1s. 6d. and 2 6
- 807 **The Duchess**—Pure white, with a zone of carmine-lake, clear yellow eye 1s. 6d. and 2 6
- 808 **Eynsford Red (Grandiflora)**—Stout leathery leaves and robust compact trusses of beautiful flowers. Much admired, 1s. 6d. and 2 6
- 809 **Swanley Blue**—It is a beautiful mauve, perfectly distinct; very striking, 9 in. 1s. 6d. and 2 6
- 810 **The Sirdar**—Splendid bold flowers; rich salmon. A grand variety 2s. 6d. and 3 6
- 811 **Pink Perfection**—Of a pleasing shade of salmon-pink; always admired; very free 1s. 6d. and 2 6
- 812 **CANNELLS' WHITE**—Of vigorous dwarf growth; bold trusses, pure white flowers of great substance 1s. 6d. and 2 6

Primula, various.

- 820 **Primula Forbesi Magenta**—Much deeper in colour than the original variety. The small lilac-red flowers are produced in whorls in great abundance; useful for cool greenhouse or indoor rockery 6d. and 1 0
- 822 **Kewensis**—For the greenhouse; flowers fragrant and bright yellow; useful for cutting 1s. and 1 6
- 823 **Malacoides**—Delicate shade of lavender, produced in whorls or tall graceful spikes in great profusion 1 0
- 824 **Obeonica Fimbriata**—Edges of petals distinctly fimbriated; from light to dark shades of lilac, hhp 1 0
- 825 **Gigantea**—Producing mostly lilac-coloured flowers, 1½ ins. across; a fine plant 1 0
- 826 **Rubra**—A really dark red colour 1 0
- 827 **Grandiflora**—Fine flowers of a soft lilac tint, at times almost white; free flowering, hhp 1 0

975	Vermilion Brilliant. —The most brilliant iridescent scarlet <i>Spencer</i> yet produced 6d. & 1 0	

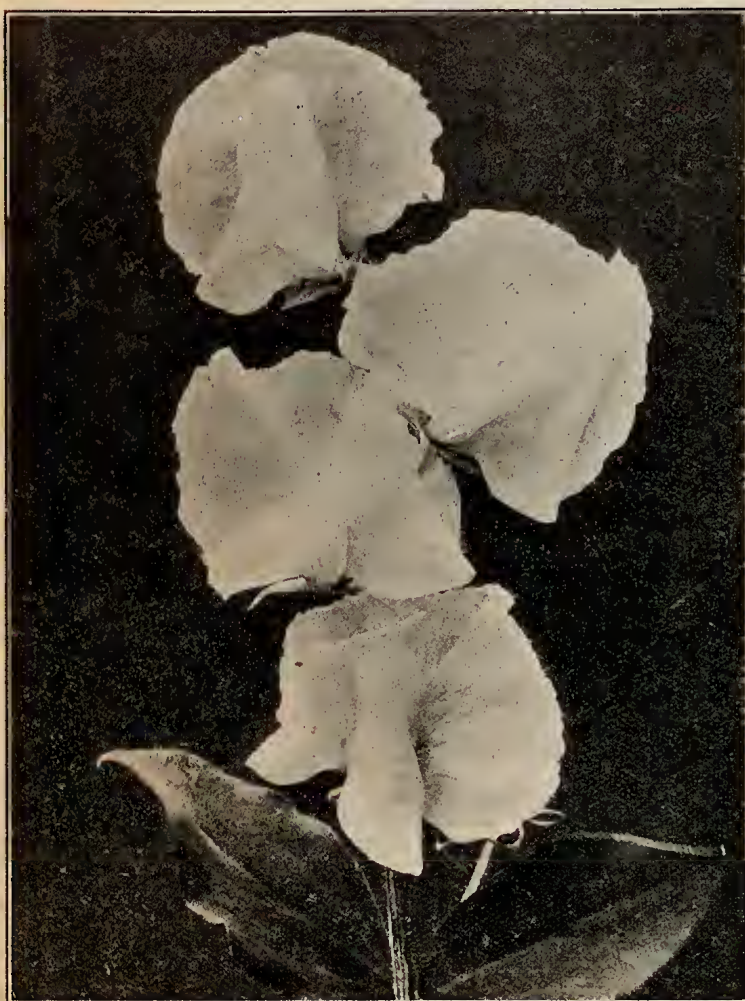

CANNELLS' GOLD MEDAL SWEET PEAS.

Several acres under cultivation.

We devote much time and attention to the cultivation and selection of this indispensable and sweetest of all flowers.

They are of easy cultivation and thrive almost anywhere, and if sown early ensures still greater success and certainty. So as to obtain the largest and finest blossoms a trench should be opened about 1 foot deep, and put in 3 inches of well-rotted manure, followed with 4 inches of soil, and well incorporate or mix, then proceed to sow the seeds over this, 3 inches apart along the row, and covering with earth to the depth of an inch. This should be done as early as the ground can be conveniently prepared in the spring, and as the young plants grow, fill up the trench around them with good soil.

SWEET PEAS.

SWEET PEA, MAUD HOLMES (Three-quarter Natural Size).

WHITE.

	Per pkt.—s. d.
976 Dorothy Eckford—Large, pure white 0 3

VIOLETS.

Single Varieties.

	Per doz.	Each.
	s. d.	s. d.
AMIRAL AVELLAN—A grand improvement on <i>odorata rubra</i> , being brighter in colour and stronger in scent; reddish purple, quite distinct	5 0	0 6
ARGENTÆFLORA—Colour white, tinged with pink; long footstalks, flowers small, strong grower and should be in every garden	5 0	0 6
BARONNE A. DE ROTHSCILD—Large, rich purple, very fine	5 0	0 6
CYCLOPS, blue, with peculiar rosette of rosy white petals in the centre, large flowers on very long firm stems, very sweetly scented	7 6	0 9
ITALIA—One of the finest	4 0	0 6
KAISER WILHELM, very fine flowers and long stalks, rich blue-violet	5 0	0 6
LA FRANCE—Immense flowers, large round petals, metallic blue-violet, flowers carried on long stiff stalks, and as large as two-shilling pieces	5 0	0 6
LUXONNE—One of the largest flowering in cultivation and fine in every way	5 0	0 6
PRINCESS OF WALES—Its blooms are more like a Viola than a Violet; flower stalks 6 to 8 inches long, and standing almost erect; habit vigorous. Award of Merit, R.H.S., per 100, 30s.	5 0	0 6
Rawson's White—Is a very nice flower, and for variety well worth growing	4 0	0 6
ROSE PERLE—Quite a new colour. The medium size flowers are of a fine satiny rose colour with white centre	—	0 6
THE RUSSIAN & LONDON—Are of a much dwarfer growth, with small leaves; their runners become quickly interwoven, and in the early spring produce their flowers so thick as to give quite the appearance of a bedding plant	3 0	—
Victoria Regina—Fine flower, long footstalks, and when well grown can be readily distinguished from all older varieties	4 0	0 6
Wellisiana—Good old kind	4 0	0 6
White Czar—Best of all the Single Whites	4 0	0 6
YELLOWRETTE (SULPHUREA)—Producing medium-sized flowers of a decided yellow; very distinct, and a great contrast to all other varieties	4 0	0 6

Double Varieties.

	Per doz.	Each.
	s. d.	s. d.
Belle de Chatenay—Flowers pure white, large, and very fragrant	5 0	0 6
De Parme—Similar in colour to <i>Marie Louise</i>	4 0	0 6
Lady H. Campbell—Only wants to be once seen and it will be universally grown as a late kind. Fine plants in 5-inch pots	6 0	0 9
Marie Louise—Rich lavender-blue; large flower, grand winter bloomer	6 0	0 9
Mdlle. Bertha Barron, <i>syn.</i> Victoria—Vigorous, compact grower, flowers freely produced, strongly scented, and of a beautiful indigo-blue	6 0	0 9
Mrs. Arthur	—	—
Mrs. J. J. Astor—Pink-coloured variety, of a pretty shade; very free, distinct	6 0	0 9
Neapolitan—Lovely colour; a great favourite	6 0	0 9
Swanley White—The most lovely double pure white Violet in cultivation, well known as the companion to <i>Marie Louise</i> and <i>Neapolitan</i>	6 0	0 9

We have always a large quantity of fine plants in 5-in. pots, 8s. and 10s. per dozen; £3 3s. per 100, of "Swanley White," "Marie Louise" and "Neapolitan," which bloom all the winter when grown under glass. Fine clumps from ground now ready to be planted out in cold frames, 4s. per doz., 30s. per 100.

A FEW POINTS WORTH ATTENTION.

FREE CARRIAGE OF SEEDS.—We send all Vegetable and Flower Seeds carriage paid to any place in the United Kingdom, **excepting**, Peas and Beans, Potatoes, Artichokes, and special quotations, when any or all of these are ordered in small quantities, as in many such cases the carriage nearly, if not quite, absorbs the value of the goods.

Potatoes and Sundries, &c., are only sent free if the value amounts to 20s. in England, and 40s. in Scotland and Ireland, and upwards, when we send the whole carriage paid. We do not pay carriage on Pot Plants, Trees, Shrubs, or Bulbs; but extra plants, &c., are added gratis in lieu of carriage.

EMPTY PACKAGES.—We charge at cost price, and allow two-thirds price if returned in good condition and *carriage paid*, and must be in all cases accompanied with sender's name and address and advised by post.

Although every care will be taken in the packing and sending of plants, seeds, &c., risk of every description must be borne by the purchaser immediately they are delivered to the Railway Company or Postal Authorities.

Every article is charged at the very lowest price. Our object is to give the ready-money buyers the advantages they are really entitled to. It may happen that prices lower than ours may sometimes be quoted. This invariably means false economy in a variety of ways—good things must be looked after by good men, who must be fairly paid, and good strains are only procured by unceasing labour and care.

Full instructions as to the proper mode of forwarding must accompany each order, as it is calculated to expedite transit of goods, and saves vexatious mistakes. All goods are advised the same day as forwarded, and the invoice posted as soon as possible afterwards.

Say by what rail. Please to write the address plain and in full on each order. No complaints entertained unless made immediately on receipt of goods.

The greatest care is exercised, and utmost liberality shown, when the selection of sorts is left to us.

It is particularly requested that all small orders under 10s. be accompanied with remittance to avoid the necessity of Booking, and very often the trouble of rendering and even re-rendering several times to our loss and probable annoyance to our Customers.

Cash with order is a sound way of doing business, and it enables us to give you advantages in our goods and also prices.

All Orders by Post will be dealt with precisely as if given personally. Those who send above their value will have additional put in to make up the full amount.

We have every facility for keeping a large stock of everything enumerated in this Catalogue, and are therefore determined to adopt the system of quick sale and ready money.

SEEDS AND BULBS FOR EXPORT—All these are specially selected for Export Orders, and carefully and securely packed in tin-lined cases. Plants in suitable boxes.

Our establishments are open for business, &c., from 6 o'clock a.m. until 6 p.m., and 5 o'clock p.m. on Saturday.

No visitors admitted on Saturday evenings and Sundays. Closed on all Bank Holidays.

Customers are particularly requested, when sending orders for friends (with their own), to do so on separate papers, with each address written plainly, to prevent mistakes.

When Special Quotations are given, Customers are kindly requested to mention such.

To avoid delay and disappointment, all business communications must be sent direct to the firm addressed "H. CANNELL & SONS," otherwise they will remain unnoticed.

Telegraphic Address: "CANNELL, Eynsford." Telephone, No. 24, Farningham.

Post Office and Postal Orders to be made payable at Eynsford, Kent, and crossed "& Co."

All Cheques to be made payable to H. CANNELL & SONS, and crossed Martin's Bank.

Not as in co-operative societies, do we demand payment beforehand, unless from unknown correspondents, when satisfactory references to bankers, or some person already known, are equally acceptable. So as to encourage quick returns and but small profits, we allow 5 per cent. discount (excepting Collections of Seeds, which are strictly nett) on all payments made within 14 days of date of invoice, but after that date must be remitted in full. When special prices are quoted, accounts are payable one month from date of invoice and no discount. We cannot undertake to send a receipt for payments under 2s. 6d., unless the return postage is sent us.

We hope all customers will apprise us of change of address, thus saving the annoyance to them of redirection by postal officials; a halfpenny card would thus save us a shilling, and often pounds. Should any Customers not receive our Catalogues at the usual seasons of the year, we shall be pleased to send copies of same upon hearing from them. Many are lost in transit.

NOTICE.—We grow our own Seeds, and every possible pains taken, and the strictest attention is paid to have and supply every item as per Catalogue; but there are so many always anxious to rush into litigation for the sake of compensation for any trifle, and failures which may occur over which perhaps we have no control, that we are compelled to issue this notice:—

CONDITIONS OF SALE.—We believe that all Seeds, Bulbs and Roots sold by us are of the description and kind specified by us at the time of sale; but owing to the practical impossibility, in many cases, of being certain of this, we give no undertaking that such Seeds, Bulbs or Roots will correspond with the description under which they are sold, and we make all sales subject to this condition. We further give no Warranty, express or implied, as to their growth, description, quality or productiveness, and will not be in any way responsible for the Crop. If the Purchaser does not accept the goods sold to him on these terms, they are at once to be returned to us. (These conditions will be found in all Seed Catalogues.)

We have received intimation from the various Railway Companies that for the future they will not pay any claims for damage or delay of goods sent at "Owner's Risk" rates; we therefore beg to inform our customers that our responsibility ceases as soon as goods are delivered into the hands of the Railway Company, and, in justice to ourselves, we cannot supply otherwise than on these conditions. All goods forwarded at "Owner's Risk" effect a great saving in cost of carriage, and which we consider of great interest to our patrons; we shall therefore continue to dispatch parcels at "Owner's Risk" unless specially requested to forward them at "Company" Risk.

COLLECTIONS
OF
FLOWER SEEDS

supplied from

2/6 up to £5.

TO ALL PARTS OF THE WORLD BY POST, RAIL AND SEA.

H. CANNELL & SONS

(Members of the Royal Horticultural Society of England),

Importers and Exporters of all New and Choice Plants, Florists' Flowers and Seeds, to and from all parts of the World.

FOREIGN AND COLONIAL NOTICES.

Plants and Seeds are despatched to India through the India Parcel Post, and also by the Ordinary Mail. Customers will kindly notify by which service they wish their parcels sent.

In America, Australia, India and Cape Town, the general expression amongst both the trade and amateurs is—“None are so successful in exporting plants as Cannell & Sons”; consequently, we need hardly say our trade has increased to a very great extent.

When Soft-wooded Plants are received abroad, if dry, let them lie in milk-warm water from three to six hours, without removing the packing from the roots; then unpack and put in pots, according to size, place in a close glass case, being careful to shade from the sun until they make fresh growth.

All orders must be fully prepaid or accompanied by satisfactory reference.

EXPORT ORDERS COMMAND THE PROMPTTEST ATTENTION.

SPECIAL TERMS TO SHIPPERS FOR LARGE QUANTITIES OF SEEDS.

Telegraphic Address: “CANNELL, EYNSFORD, ENGLAND.

CANNELLS' Plant, Fruit and Flower Manure.

An essential aid to Nature and Greater Perfection.

(SPECIALLY PREPARED AND ALWAYS RELIABLE.)

Treble your Produce—Quality and Quantity combined

**For GREENHOUSE PLANTS, FOLIAGE and FLOWERING PLANTS, ROSES,
VINES, FRUIT TREES, VEGETABLES, FLOWER GARDENS, and LAWNS.**

ALWAYS AN ABUNDANCE OF FLOWERS.

THE properties of this Manure go direct to make Flowers, Fruit, and Plants more brilliant, larger and finer, without the gross foliage. After one gets used to it they will soon gauge the exact strength that is necessary for any plant desired to have extra fine, the great thing is not to over apply it, but, if used with discretion, this is the most convenient and valuable of all Manures—its effect in a fortnight is marvellous—and those who use it double their produce. We have several who leave us standing orders for large quantities to be sent at stated times. All are charmed with its results, no greenhouse or garden ought to be without it, and for all who wish to be first at exhibitions, it is absolutely necessary. Every shilling so expended gives another in return, and often two.

DIRECTIONS FOR USE.

FOR LAND IN GOOD CULTIVATION AND GROWING CROPS—Three-quarters of an ounce to the square yard, one and a half cwt. to the acre. Mix with treble its quantity of fine, slightly damp soil, and scatter it regularly; you can see to a line how far it has been put.

FOR POOR LAND AND POTATOES.—Four to six cwt. to the acre.

FOR POTTING.—One ounce to the bushel of good compost, and thoroughly mix.

TOP DRESSING.—Two ounces to a bushel of good soil.

LIQUID MANURE.—Half ounce to a gallon of water, and increase it a little twice a week until the plants are well in flower.

FOR LAWNS.—Scatter broadcast at the rate of one and three-quarter ounces to the square yard, afterwards to be well watered.

DOUBLE PRODUCTION of everything is obtained by using it. Nothing is so important in every part of the garden as two or three applications during the season. It gives more than satisfaction. A 1-lb. tin will show its effects and guarantee its general use.

1-lb tins 1s., post free 1s. 4d.; 3 lbs. 2s. 6d., post free 3s.; 7 lbs. 4s., post free 4s. 8d.

In bags, 14 lbs. 6s.; 28 lbs. 10s 6d.; 56 lbs. 18s.; 1 cwt. 30s.

“KATAKILLA”

(PAT. & REGD.)

POWDER-INSECTICIDE WASH.

Non-Poisonous. Free from Arsenic, Copper and Nicotine. The most effective and economical Insecticide Wash to Exterminate Plant and Fruit Pests. To Clean Roses, Vegetables, &c.

Ready for use. No Boiling. Mixes with cold water, hard or soft. Ready measured. No expensive packages. No leaky tins.

Specially recommended for washing all Garden Plants and Vegetables, and for Fruit Tree Washing to destroy Red Spider, Psylla (*Apple Sucker*), Woolly Aphis, Scale Insects, Aphis of all kinds, Fly and Lice; it is also very effective against the Gooseberry Saw Fly, Caterpillar and most other kinds of Caterpillars.

Free from Arsenic or Nicotine; Fruit or Vegetables washed with it are in no way injured for use.

It is invaluable as a general wash for Fruit Trees and Bushes, Roses, Peas, Beans, Cabbages, Cucumbers, Tomatoes and any hardy plant.

It is harmless to the plant and harmless to the men using it. Cattle may graze under trees washed with “Katakilla.”

To destroy Lice, Aphis, Green or Black Fly, Psylla (*Apple Sucker*), Mites, Red Spider, &c.

To destroy Woolly Aphis, Scale Insects, Caterpillars, &c.

Full Directions for use on each package.

Sold in 1/- Cartons, to make 10 gallons Solution. Each Carton contains 4 measured quantities each for 2½ gallons.

And in 3/- Cartons to make 50 gallons Solution.

Sole Manufacturers: McDOUGALL BROTHERS, Ltd., 66/68, Port Street, Manchester, England.
